

Device Data Credit Score

A Telco-agnostic service that can evaluate creditworthiness based on the device data of a customer.

How it works

- **SDK:** for integration in the existing clients' application; or
- **STAND ALONE APP:** used only for the purpose of credit scoring (user installs it, accepts T&C, verifies his identity, clicks a button and process is completed)

Why choose this solution?

Make more informed and better decisions. Enhance your existing credit score, KYC and fraud detection.

Product Deployment Requirements

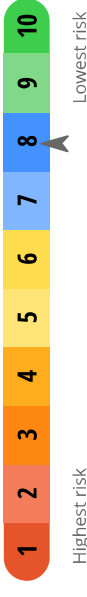

- Android app and integration with FinScore Library; or
- Integrate FinScore app into the process

Applicant No. 819

Overall Credit Score

867

ACCEPT

Device brand	Samsung
